

October 7: Hammas Tactics

Botulinom Toxin Production and Usage

On the morning of October 7, more than a thousand Hammas terrorists swarmed Israeli communities enveloping the Gaza Strip.

Among the documents seized from the terrorists was a comprehensive 26-page manual containing instructions on how to produce and utilize botulinom toxins – **biological weapons classified as WMDs (weapons of mass destruction).**

Presented here are translated excerpts from the manual, with the original contents preserved as much as possible.
